Help Menu

- **Browsing Maps**
  - The user can change the floor map in 'Select Map' Section by using the toggle to change the building and selecting the desired floor through the second toggle in the section and pressing Enter to display the floor Map.
- **Scrolling Maps**
  - If the entire map is not visible the user can scroll the map by using the scroll bar under the map and on the right of the map to view the map and its layers.
- **Displaying Layers**
  - The Layer section allows the user the ability to hide and display these layers. Hiding a layer entails hiding all POIs grouped in that layer and displaying a layer entails showing all the POIs that are grouped in that layer. The user has the option of displaying multiple layers at the same time.
- **Searching Point of Interest**
  - The user has the ability to search for points of interest in particular buildings by using the 'Searching POI' section, both built-in POIs and user-defined ones, through a text-based search feature. The map containing the POI is displayed and the POI is highlighted.
- **POI Discovery**
  - The user has the option to discover available POIs on each map. The POIs can be categorized and organized in any manner as long as the user can find every POI on the current map including user-defined POIs. If the user clicks on a POI, the application follows the same sequence of events that must occur when the user initiates a search for a POI.
- **Built-In Points of Interest (POI)**
  - The application has various points of interest already built-in which can be toggled on and off at the user's discretion following what is described in Displaying Layers.
- **Clicking on POIs**
  - The user can click on the POI which highlights it to indicate to the user that it has been selected and display information about the POI. The name/title, room number, and short description is displayed as a popup. The user can also favorite the POI by clicking the favorite button.
  - Deselecting or unhighlighting the POI causes the information to be hidden.

- **User-Created Points of Interest**
  - The users can create their own POIs and enter a name, room number, and description. The user-created POIs are their own layer and it is editable and removable by the user.
- **Exit/Close and Navigation**
  - The user can exit the application without corrupting or losing any data by clicking 'Exit' on the top left side of the application screen.
- **User Help**
  - The user can view the help pdf that covers all features of the application and explains how to perform all possible tasks by clicking 'Help' on the top left side of the application screen.
- **About the application**
  - The user can view the name of your application, the version, the release date, and a list of your team members' names and emails by clicking 'About' on the top left side of the application screen.
- **Current Weather**
  - The user can view the current weather by clicking the 'Weather' on the top left side of the application screen.
